

AMENDMENTS TO THE SPECIFICATION

Please amend the specification of the present application at page 11, lines 5-13, as follows:

Therefore, according to the embodiment of the invention, the above-mentioned problems can be solved. Specifically, as shown in FIG. 10, slits 1a which pass through to the inside are formed at both sides of the bottom panel of the chassis case 1 of the second disc device A2. Recessed grooves 1b are formed in order to prevent contacting with the head of the attaching screws in the assembled state, and threaded holes [[1b]] 1c are formed in positions corresponding to the recessed grooves 1b in the top panel of the chassis case 1.
